AUTHOR: Popović, Pavle, Doctor and Chief Serbian Sanitary
Inspector (Beograd)

TITLE: Views and Experience of the Sanitary Inspection Ser-
vice on the Question of Food Additives

PERIODICAL: Tehnika, 1959, Nr 1, pp 117-120 (YUG)

ABSTRACT: This report was presented at the Symposium of Nutri-
tionists on 2 June 1958. Since the Pravilnik o
kvalitetu živežnih namirnica (Food Quality Regula-
tions) came into force a year ago, research on food
additives has been carried out and the results
showed many cases of misuse of various additives.
These misuses have mainly been induced through ob-
scure and superficial wording in the Regulations.
Additives are often used to cover the inferior
quality of food rather than to improve its quality
and appearance. The greatest misuse is with the

Views and Experience of the Sanitary Inspection Service on the Question of Food Additives.

dyes. The Regulations list 7 natural and 14 synthetic dyes for use in food and 6 synthetic dyes for dyeing eggs, stamping meat, cheese and sausages. None of the 14 synthetic dyes are used in food, since none of the plants in Serbia produce these dyes. The dyes produced by the "ETOL" Plant in Celje are mainly used and although they are registered with the Republiški sanitarni inspektor NR Slovenije (Republican Sanitary Inspector of Slovenia) they contain chemicals which are not permitted. Some of the dyes permitted by the Regulations have been found by the World Health Organization to possess carcinogenic properties and the author feels that this problem should be solved as soon as possible. The maximum quantity of the dyes permitted by the Regulations has also not been defined and considerable misuse occurs in this direc-

"Ismelin in the Treatment of Arterial Hypertension."

Belgrade, Medicinski Glasnik, Vol 16, No 9, Sept 1962; pp 410-412.

Abstract [English summary modified] Authors treated with guanethidine 30 hospitalized and 38 outpatients, most of them having either essential (33) or atherosclerotic (19) form of hypertension. Average duration of treatment was 2 to 3 weeks; dose 30 to 50 milligrams per day. Only side effects were mild diarrheal syndrome in 2; good results on hypertension in all patients. Comprehensive discussion of literature on the drug. Structural formula. 2 tables, many Western authors cited in text but no bibliographic references.

"Diabetic Ketoacidosis"

Belgrade, Medicinski Glasnik, Vol 19, No 11-12, Nov-Dec 1965, pp 333-336

Abstract: A review is given of 42 patients with diabetic ketoacidosis which originated when catabolism in the tissues prevented anabolism normally regulated with insulin. From the clinical point of view, it was presented in 3 different disturbances of the consciousness (somnia, sopor, and coma). Biochemical disturbances are not sufficient to show the state and degree of this most serious diabetic complication. Treatment of the illness is with insulin, liquids, electrolytes, glucose, and antibiotics. 1 Yugoslav, 12 Western references.

"Unstable Diabetes as a Clinical Problem."

Belgrade, Medicinski Glasnik, Vol 17, No 5, May 1963, pp 181-185.

Abstract: [Author's Serbocroatian summary modified] Unstable diabetes is always the result of partial or complete insufficiency of insular material. The causes are numerous and should be sought in that their elimination can resolve the problem of instability. Insulin is essential in the control of this type of diabetes. The amount rather than the type of preparation is difficult to select. Diet and athletics or useful labor can also be of great usefulness in the control of unstable diabetes.

9 Yugoslav and Western references.

ful due to modern anaesthesiology. A preoperative diagnosis of ileus of diverticular origin is difficult and is established only with operation. The authors applied various operative methods, depending on the type of ileus and the general condition of the patient. The delicacy of ileus diagnosis requires the cooperation of pediatricians and the pediatric surgeons. 9 Yugoslav, 6 Western references.
